Product Description

The AZOUT basin's elliptical design features a smooth curve around the edge, which creates its distinct shape and character. The basin is manufactured from TeknoForm, which is a polymer and resin based composite with a wide range of textures.

Material

TeknoForm is a polymer-based material that can mimic a variety of textures, such as mosaics, stone, marble or wood, without the associated cost. An example is Pittella's Travertino basins, which provide the same effect as Travertine without the weight or expense.
