Product Description

The Mosaic circular basin features a luxury mosaic appearance, which creates a truly astounding and opulent character. The basin is manufactured from TeknoForm, which is a polymer, and resin based composite designed to mimic textures.

Material

TeknoForm is a polymer-based material that can mimic a variety of textures, such as mosaics, stone, marble or wood, without the associated cost. An example is Pittella's Travertino basins, which provide the same effect as Travertine without the weight or expense.
