Product Description

The Rapolano basin features a beautiful circular shape and textured edge, which creates its distinct character and form. The basin is manufactured from TeknoForm, which is a polymer, and resin based composite designed to mimic textures.

Material

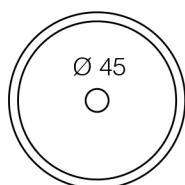

TeknoForm is a polymer-based material that can mimic a variety of textures, such as mosaics, stone, marble or wood, without the associated cost. An example is Pittella's Travertino basins, which provide the same effect as Travertine without the weight or expense.
